

Ad-hoc announcement pursuant to Article 53 of the SIX listing rules

Kuros Biosciences USA, Inc. announces an exclusive strategic agreement with the Medtronic spinal division

- Medtronic will act as the exclusive sales agent of MagnetOs™ for Kuros Biosciences USA, Inc. in mutually agreed upon sales territories for use in spine surgeries
- Kuros will work collaboratively to sell, market and provide support services to Medtronic's sales force
- Kuros will keep responsibility for contracts, hospital partnerships and the recognition of revenue from sales
- Kuros will continue to sell directly in non-contracted territories as well as in markets outside of spine
- This agreement transforms an initial trial agreement into a strategic alliance

Schlieren, Switzerland, January 7, 2025 – Kuros Biosciences USA Inc., (“Kuros”), a wholly owned subsidiary of Kuros Biosciences AG, a global leader in advanced musculoskeletal bone healing technologies, today announced a strategic five-year, exclusive sales agency agreement with Medtronic, a leading global healthcare technology company. The agreement provides Medtronic with exclusivity in certain spine geographies within the U.S. market, underscoring a shared commitment to expanding access to Kuros' pioneering MagnetOs bone grafting technology.

This agreement positions Kuros for new opportunities in the U.S. spine market and also paves the way for broader adoption of the MagnetOs family of products, which are supported by robust clinical data and innovative designs. This agreement transforms an initial trial agreement into a strategic alliance for a period of five years.

Chris Fair, Chief Executive Officer of Kuros Biosciences, commented: “What started as a trial agreement has now evolved into a strategic alliance with Medtronic reflecting an important milestone for Kuros. This agreement will also help us drive the scaling up process, further optimize our operating leverage, and continue our rapid revenue growth both with Medtronic and in our own direct channels.”

About MagnetOs

MagnetOs is a bone graft like no other: thanks to its NeedleGrip™ surface technology, it grows

bone even in soft tissues. This surface technology provides traction for our body's vitally important 'pro-healing' immune cells (M2 macrophages). This in turn, unlocks previously untapped potential to stimulate stem cells – and form new bone throughout the graft. The growing body of science behind NeedleGrip is called osteoimmunology. But for surgeons and their patients it means one thing: a more predictable fusion. ^{†‡1-5}*

Indications statement
